

# *Financial Dashboard*

## *Your have shared some your working day frustrations with us*

“We interact with so many applications and platforms every day, all with different log-in”

“I spend 1 week a month on collecting data for my CFO reporting”

“...no one is really happy about their treasury system”

“Treasury is a never ending task. You keep adjusting”

“I have not yet seen a system which can give me full financial overview & insight”

“A lot of time is spent on extracting data or re-typing information from one system to another”

## *The need for overview, automation and customisation is recurring - just described in different ways*

“I don't know my cash flow before the data is typed in the system. That is why I need to check the account everyday”

“I want to stay clear of admin tasks. I have way too many. In fact, I don't want to grow because doing so would inevitably increase the complexity”

“I could optimize my logistic, stock and procurement but I don't know where to start”

“It is difficult to plan and use my resources well because I never know what is going to happen next week or next month”

“We need more insights, and you know so much about us and our business”

“I need liquidity: for daily operation or for growth”

# Financial Dashboard aims to provide full financial overview & control

By offering an interface that

- Adapts to corporate workflows,
- Integrates applications from multiple service providers
- Features proactive advisory and insights

we want to enable you to optimize your daily financial workflows and decision making

# *Thank You!*
